

Hello everyone! I'm Parmila Sri P, a third-year Information Technology student passionate about learning, technology, and solving real-world problems.

I believe every challenge is an opportunity to learn. Through my academic projects, I have developed my problem-solving and technical skills while working on practical applications in web development and healthcare.

Communication is one of my strengths that I continuously develop through presentations, discussions, and teamwork. I believe that expressing ideas clearly and listening to others are important for building effective professional relationships.

Working with different people has taught me the importance of collaboration, responsibility, and mutual respect. Whenever I take up a project, I focus on planning my tasks, taking ownership, and completing my responsibilities effectively.

Technology is constantly evolving, so I make it a priority to improve my technical knowledge through coding practice, certifications, and hands-on projects. I have experience with C, Java, Python, HTML, CSS, JavaScript, SQL, React.js, Node.js, Express.js, and MongoDB. I am also interested in MERN Stack Development, Full Stack Development, Cloud Computing, and DevOps.

My projects, including a Web-Based Shopping Solution with Time and Price Comparison and a Smart AI-Powered Healthcare System, have given me practical exposure to developing technology-based solutions. I have also gained experience in research and innovation through my project work.

I believe that proper organization, continuous learning, and effective communication are as important as technical skills. I am committed to improving myself and becoming an industry-ready professional.

My goal is to build a successful career in the software industry where I can apply my technical skills, contribute to meaningful projects, continuously learn new technologies, and grow as a professional.

Thank you.
